An Orc on the Wild Side-Tom Holt 2019-09-10 An Orc on the Wild Side is the latest comic masterpiece from one of the funniest writers in fantasy. Winter is coming, so why not get away from it all? Being the Dark Lord and Prince of Evil is not as much fun as it sounds, particularly if you are a basically decent person. King Mordak is just such a person. Technically he’s more goblin than person, but the point is that he is really keen to be a lot less despicable than his predecessors. Not that the other goblins appreciate Mordak’s attempts to redefine the role. Why should they when his new healthcare program seems designed to actually extend life expectancy, and his efforts to end a perfectly reasonable war with the dwarves appear to have become an obsession? With confidence in his leadership crumbling, what Mordak desperately needs is a distraction. Perhaps some of these humans moving to the Realm in search of great homes at an affordable price will be able to help? The product of a successful crowdfunding campaign, Slave to Fashion celebrates those fighting for justice and the many initiatives that are taking place. It contains a practical toolkit that all consumers can use to demand change from the companies that produce our clothes. Safia Minney is a pioneer in ethical business. She developed the fashion industry’s first fair trade supply chains and has helped to create social and organic standards to improve the lives of thousands of economically marginalized people in the developing world. Heads Or Tails-Jochen Hörisch 2000 Examines the role of money in modern German literature. The Crisis of the 14th Century-Martin Bauch 2019-12-16 Pre-modern critical interactions of nature and society can best be studied during the so-called "Crisis of the 14th Century". While historiography has long ignored the environmental framing of historcial processes and scientists have over-emphasized nature's impact on the course of human history, this volume tries to describe the at times complex modes of the late-medieval relationship of man and nature. The idea of 'teleconnection', borrowed from the geosciences, describes the influence of atmospheric circulation patterns often over long distances. It seems that there were 'teleconnections' in society, too. So this volumes aims to examine man-environment interactions mainly in the 14th century from all over Europe and beyond. It integrates contributions from different disciplines on impact, perception and reaction of environmental change and natural extreme events on late Medieval societies. For humanists from all historical disciplines it offers an approach how to integrate written and even scientific evidence on environmental change in established and new fields of historical research. For scientists it demonstrates the contributions scholars from the humanities can provide for discussion on past environmental changes.

Making Sense of Illness-Robert A. Aronowitz 1998 By juxtaposing the contested and controversial histories of a range of diseases, Aronowitz shows how values and interests have determined research programs, public health activities, clinical decisions and the patient's experience of illness. Microbial Biochemistry-G. N. Cohen 2014-07-21 Microbial physiology, biochemistry and genetics allowed the formulation of concepts that turned out to be important in the study of higher organisms. In the first section, the principles of bacterial growth are given, as well as the description of the different layers that enclose the bacterial cytoplasm, and their role in obtaining nutrients from the outside media through different permeability mechanism described in detail. A chapter is devoted to allostery and is indispensable for the comprehension of many regulatory mechanisms described throughout the book. Another section analyses the mechanisms by which cells obtain the energy necessary for their growth, glycolysis, the pentose phosphate pathway, the tricarboxylic and the anaplerotic cycles. Two chapters are devoted to classes of microorganisms rarely dealt with in textbooks, namely the Archaea, mainly the methanogenic bacteria, and the methylotrrophs. Eight chapters describe the principles of the regulations at the transcriptional level, with the necessary knowledge of the machineries of transcription and translation. The next fifteen chapters deal with the biosynthesis of the cell building blocks, amino acids, purine and pyrimidine nucleotides and deoxynucleotides, water-soluble vitamins and coenzymes, isoprene and tetrapyrrole derivatives and vitamin B12. The two last chapters are devoted to the study of protein-DNA interactions and to the evolution of biosynthetic pathways. The considerable advances made in the last thirty years in the field by the introduction of gene cloning and sequencing and by the exponential development of physical methods such as X-ray crystallography or nuclear magnetic resonance have helped presenting metabolism under a multidisciplinary attractive angle.

Spatial Justice-Andreas Philippopoulos-Mihalopoulos 2014-10-30 There can be no justice that is not spatial. Against a recent tendency to despatialise law, matter, bodies and even space itself, this book insists on spatialising them, arguing that there can be neither law nor justice that are not articulated through and in space. Spatial Justice presents a new theory and a radical application of the material connection between space - in the geographical as well as sociological and philosophical sense - and the law - in the broadest sense that includes written and oral law, but also embodied social and political norms. More specifically, it argues that spatial justice is the struggle of various bodies - human, natural, non-organic, technological - to occupy a certain space at a certain time. Seen in this way, spatial justice is the most radical offspring of the spatial turn, since, as this book demonstrates, spatial justice can be found in the core of most contemporary legal and political issues - issues such as geopolitical conflicts, environmental issues, animality, colonisation, droneing, the cyberspace and so on. In order to aque this, the book employs the landscape, as the tautology between law and space, and the concept of atmosphere in its geological, political, aesthetic, legal and biological dimension. Written by a leading theorist in the area, Spatial Justice: Body, Landscape, Atmosphere forges a new interdisciplinary understanding of space and law, while offering a fresh approach to current geopolitical, spatiological and ecological issues.

Descriptive Zoopraxography-Eadweard Muybridge 2020-08-05 Reproduction of the original: Descriptive Zoopraxography by Eadweard Muybridge Regimes of Mobility-Noel B. Salazar 2016-08-25 Mobility studies emerged from a postmodern moment in which global 'flows' of capital, people and objects were increasingly noted and celebrated. Within this new scholarship, categories of migrancy are all seen through the same analytical lens. This book builds on, as well as critiques, past and present studies of mobility. In so doing, it challenges conceptual orientations built on binaries of difference that have impeded analyses of the interrelationship between mobility and stasis. These include methodological nationalism, which counterpoises concepts of internal and international movement and native and foreigner, and consequently normalises stasis. Instead, the book proposes a 'regimes of mobility' framework that addresses the relationships between mobility and immobility, localisation and transnational connection, experiences and imaginaries of migration, and rootedness and cosmopolitan openness. Within this framework and its emphasis on social fields of differential power, the various contributors to this collection ethnographically explore the disparities, inequalities, racialised representations and national mythscapes that facilitate and legitimate differential mobility and fixity. Although they examine nation-state building processes, the anthropological analysis is not confined by national boundaries. This book was originally published as a special issue of the Journal of Ethnic and Migration Studies.

Invasion 1944: Rommel and the Normandy Campaign-Lt.-Gen. Hans Speidel 2016-07-26 Lieutenant-General Hans Speidel's Invasion 1944 tells the story, from the German viewpoint, of one of the most critical periods of World War II. Indeed, to most Americans the summer months of 1944, highlighted by the battles on the Normandy beaches, represent the climax of the world convulsion. Every detail of this epic struggle is today of interest not only to those Americans who participated personally in the battles on the beaches and in the Normandy countryside, but to that still greater number who sweated and bled in Italy, on South Pacific isles, or in the Philippines, or were forced to stay at home. For the Norman beaches have now become a keystone in the arch of American military tradition—worthy to stand alongside Chancellorsville, Appomattox, Château-Thierry and the Meuse-Argonne. Our curiosity, therefore, cannot but be piqued as to what went on in the Château La Roche Guyon, the headquarters of the German Army Group opposing the Allied Normandy armies, as, day by day, American and British pressure brought Hitler's doom nearer. Invasion is by no means merely military history, a record of the estimates and orders of the German Command during the Normandy struggle. This book tells a double story. The battles are the background, while the foreground is dominated by the narrative of another climactic struggle, that between the commander of the Army Group, Erwin Rommel, "the Desert Fox," and his overlord Adolf Hitler. "A notable contribution to the...literature on the Normandy campaign. The author was Chief of Staff successively to Rommel, Kluge and Model.... What hat has to say about the German defeat is authoritative and of high interest."—New York Herald Tribune Book Review
