Viking Attacks on Paris-Abbo (Monk of St. Germain) 2007 In 885 AD, the Vikings laid siege to Paris, to which a young monk named Abbo, of the abbey of Saint-Germain-des-Pres, stood as witness. Later, he came to make a record of what he saw, heard and believed in a verse chronicle, the *Bella parisiacae urbis*. His often stirring account speaks of the relentless and ingenious attacks of the Norsemen, the selfless heroism of the defending Frankish warriors, and the misery and terror of the besieged Parisians. But his canvas is far larger than this single occurrence, for he hints at greater things yet to come, such as the final disintegration of Carolingian rule, the eventual establishment of the Capetian line of

monarchs, and the creation of a French Danelaw, namely, Normandy. Ultimately, however, Abbo is not concerned with an impartial narration of events, but rather with salvation through history - of the individual and of the nation of the Franks. The macaronic style of his chronicle very much appealed to the sensibilities of the time, thus ensuring that Abbo's work would endure.

Modeling of Structural-Acoustic Interaction Using Coupled Fe/Be Method and Control of Interior Acoustic Pressure Using Piezoelectric Actuators-National Aeronautics and Space Administration (NASA) 2018-07-18 A coupled finite element (FE) and boundary element (BE) approach is presented to model full coupled structural/acoustic/piezoelectric systems. The dual reciprocity boundary element method is used so that the natural frequencies and mode shapes of the coupled system can be obtained, and to extend this approach to time dependent problems. The boundary element method is applied to interior acoustic domains, and the results are very accurate when compared with limited exact solutions. Structural-acoustic problems are then analyzed with the coupled finite element/boundary element method, where the finite element method models the structural domain and the boundary element method models the acoustic domain. Results for a system consisting of an isotropic panel and a cubic cavity are in good agreement with exact solutions and experiment data. The response of a composite panel backed cavity is then obtained. The results show that the mass and stiffness of piezoelectric layers have to be considered. The coupled finite element and boundary element equations are transformed into modal coordinates, which is more convenient for transient excitation. Several transient problems are solved based on this formulation. Two control designs, a linear quadratic regulator (LQR) and a feedforward controller, are applied to reduce the acoustic pressure inside the cavity based on the equations in modal coordinates. The results indicate that both controllers can reduce the interior acoustic pressure and the plate deflection. Voluntary Admission-Anthony Bayss 2014-11-03
We live in a society where talking openly about your feelings and mood comes with reluctance. For some people their daily stresses and worries can grow into an unchecked illness. There is nothing more terrifying than living with a mental illness while it consumes your thoughts and ultimately takes control of your actions. The critical decision by author Anthony Bayss to voluntarily admit himself into an emergency psychiatric center was made to stymie another attempted suicide. Voluntary Admission explores how even a well-educated person, who comes from a loving family, can be struck down with major depression in the prime of his life. The book outlines how the character traits of individuals can play a supporting role in

contributing to illnesses like depression. Anthony puts aside his worries about what others may think of his major depression to write a very personal account of how quickly his mental state spiraled out of control. For those people who have an undiagnosed mental illness you will be encouraged to seek help after experiencing the authors detailed hospitalization and outpatient treatments. Anthony's story teaches readers that when life events propel your character to breaking point, asking for help does not dent your pride it saves your life.
