Painting in Spain-Jonathan Brown 1998 Focusing on the interaction between art and the socio-economic and political conditions that prevailed in Spain's golden age, this book offers information about religious beliefs, social attitudes the activities of patrons and collectors, and how these were absorbed and interpreted by painters. The author sets the history of Spanish painting within a European context and explores Spain's contact with artistic centres in Italy and the Netherlands. He discusses not only Spanish artists but also such non-Spanish painters as Titian, Rubens, and Luca Giordano, who either worked in Spain or influenced other artists there. Brown also examines the collections of foreign paintings that Spanish noblemen and prelates assembled and how these collections affected the production of art and the social status of the Spanish artist.

Bridges to Scandinavia-Andrea Merregalli 2020-01-15 This volume is the final output of a project started in 2013 on the occasion of the fortieth anniversary of the Scandinavian Section of the University of Milan. A group of scholars working on different European and non-European cultural and literary traditions come together here to discuss the relationships between their areas of study and the Nordic countries. The range of the contributions expands over time and space, from the Middle Ages to the present day, from Poland in the east to the United States in the west, across various European countries. Through various kinds of expertise and different perspectives, this intercultural discourse deals with diverse themes, including the perception of Nordic culture(s) by foreign writers as well as the image of other cultures in Scandinavian works. In particular, the literary and cultural interchange of models and ideas between the North and other areas is investigated in a number of essays devoted to numerous authors, including, among others, Klaus Böldl, Carmen de Burgos, Carlo Emilio Gadda, Gerhart Hauptmann, Henrik Ibsen, Stieg Larsson, Carl von Linné, Rainer Maria Rilke, J.D. Salinger, Henryk Sienkiewicz, Mme de Staël, August Strindberg, and Tomas Tranströmer.

The Art of the Start 2.0-Guy Kawasaki 2015-03-03 Fully revised and expanded for the first time in a decade, this is Guy Kawasaki's classic, bestselling guide to launching and making your new product, service, or idea a success. Whether you're an aspiring entrepreneur, small-business owner, intrapreneur, or not-for-profit leader, there's no shortage of advice on topics such as innovating, recruiting, fund raising, and branding. In fact, there are so many books, articles, websites, blogs, webinars, and conferences that many startups get paralyzed, or they focus on the wrong priorities and go broke before they succeed. The Art of the Start 2.0 solves that problem by distilling Guy Kawasaki's decades of experience as one of the most hardworking and irreverent strategists in the business world. Guy has totally overhauled this iconic, essential guide for anyone starting anything. It's 64 percent longer than version 1.0 and features his latest insights and practical advice about social media, crowdfunding, cloud computing, and many other topics. Guy understands the seismic changes in business over the last decade: Once-invulnerable market leaders are struggling. Many of the basics of getting established have become easier, cheaper, and more democratic. Business plans are no longer necessary. Social media has replaced PR and advertising as the key method of promotion. Crowdfunding is now a viable alternative to investors. The cloud makes basic infrastructure affordable for almost any new venture. The Art of the Start 2.0 will show you how to effectively deploy all these new tools. And it will help you master the fundamental challenges that have not changed: building a strong team, creating an awesome product or service, and facing down your competition. As Guy likes to say, "Entrepreneur is a state of mind, not a job title." His book will help you make your crazy ideas stick, through an adventure that's more art than science – the art of the start.

The System of the World-Neal Stephenson 2009-10-13 'Tis done. The world is a most confused and unsteady place -- especially London, center of finance, innovation, and conspiracy -- in the year 1714, when Daniel Waterhouse makes his less-than-triumphant return to England's shores. Aging Puritan and Natural Philosopher, confidant of the high and mighty and contemporary of the most brilliant minds of the age, he has braved the merciless sea and an assault by the infamous pirate Blackbeard to help mend the rift between two adversarial geniuses at a princess's behest. But while much has changed outwardly, the duplicity and danger that once drove Daniel to the American Colonies is still coin of the British realm. No sooner has Daniel set foot on his homeland when he is embroiled in a dark conflict that has been raging in the shadows for decades. It is a secret war between the brilliant, enigmatic Master of the Mint and closet alchemist Isaac Newton and his archnemesis, the insidious

counterfeiter Jack the Coiner, a.k.a. Jack Shaftoe, King of the Vagabonds. Hostilities are suddenly moving to a new and more volatile level, as Half-Cocked Jack plots a daring assault on the Tower itself, aiming for nothing less than the total corruption of Britain's newborn monetary system. Unbeknownst to all, it is love that set the Coiner on his traitorous course; the desperate need to protect the woman of his heart -- the remarkable Eliza, Duchess of Arcachon-Qwghlm -- from those who would destroy her should he fail. Meanwhile, Daniel Waterhouse and his Clubb of unlikely cronies comb city and country for clues to the identity of the blackguard who is attempting to blow up Natural Philosophers with Infernal Devices -- as political factions jockey for position while awaiting the impending death of the ailing queen; as the "holy grail" of alchemy, the key to life eternal, tantalizes and continues to elude Isaac Newton, yet is closer than he ever imagined; as the greatest technological innovation in history slowly takes shape in Waterhouse's manufactory. Everything that was will be changed forever ... The System of the World is the concluding volume in Neal Stephenson's Baroque Cycle, begun with Quicksilver and continued in The Confusion.

The New Century Italian Renaissance Encyclopedia-Marvin B. Becker 1972 Descriptions of literary works and characters and biographical material on important artists of the three-hundred-year period
Parasitic Diseases 6th Edition-Daniel Griffin 2017-03-25 Remarkable achievements in parasitic disease research, both basic and translational, have occurred over the last ten years, and we have incorporated the majority of these into the 6th edition of Parasitic Diseases. We have added over 1,000 new references to document these advances. Innovative work in the laboratory has provided the clinician/research scientist with a much clearer understanding of the mechanisms of pathogenesis. The number of recently discovered interleukins and their cellular networks has completely re-ordered our comprehension of how parasites and our defense system works to produce protection against infection/reinfection, or in some cases, how it becomes subverted by the offending pathogen to enable it to endure inside us for long periods of time. A plethora of molecular-based diagnostic tests have found their way into the routine of the parasitology diagnostic laboratory, improving the ease at which the offending pathogen can be rapidly identified. Newer drugs, many with less harmful side-effects than the ones they replaced, have come on the market that make controlling parasite populations at the community level possible without the risk of harming the very ones we wish to help.

Vienna in the Age of Uncertainty-Deborah R. Coen 2008-09-15 Vienna in the Age of Uncertainty traces the vital and varied roles of science through the story of three generations of the eminent Exner family, whose members included Nobel Prize-winning biologist Karl Frisch, the teachers of Freud and of physicist Erwin Schrödinger, artists of the Vienna Secession, and a leader of Vienna's women's movement. Training her critical eye on the Exners through the rise and fall of Austrian liberalism and into the rise of the Third Reich, Deborah R. Coen demonstrates the interdependence of the family's scientific and domestic lives, exploring the ways in which public notions of rationality, objectivity, and autonomy were formed in the private sphere. Vienna in the Age of Uncertainty presents the story of the Exners as a microcosm of the larger achievements and tragedies of Austrian political and scientific life in the late nineteenth and early twentieth centuries.

Why Forests? Why Now?-Frances Seymour 2016-12-27 Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. Why Forests? Why Now? synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

Best Practices for the Mentally Ill in the Criminal Justice System-Lenore E.A. Walker 2015-08-17 This timely brief resource introduces a new evidence-based model for treatment of mentally ill individuals in jails, with emphasis on community-based options. The book's best-practices approach extends to frequently related issues such as addiction, domestic violence, juvenile considerations, and trauma and describes successful programs coordinating judicial and clinical systems. These guidelines for decriminalizing non-violent behaviors and making appropriate services available to those with mental problems should also help address issues affecting the justice system, such as overcrowding. Included in the coverage: The Best Practices Model. Best practices in law enforcement crisis interventions with the mentally ill. Problem-solving courts and therapeutic jurisprudence. Competency restoration programs. A review of best practices for the treatment of persons with mental illness in jail. Conclusions, recommendations, and helpful appendices. Beyond Tropical Deforestation-Didier Babin 2004 Does the diagnosis of irreversible destruction of both forests and their biodiversity actually mask a wide range of patterns? Based on the results of natural and social scientists, this book attempts to answer fundamental questions such as: what is deforestation and how do we measure it? What changes result from deforestation and how do human societies manage these changes? It explores the many and varied aspects of deforestation, a process whose effects are not always as negative as perceived.

Tropical Rainforests and Agroforests under Global Change-Teja Tschardt 2010-02-04 not only for land use systems that depend on the regular supply of rain or irrigation water but also for the future development of natural rainforests as drought stress has been shown to affect tree growth and species composition in old-growth forests (Wright 1991, Walsh and Newbery 1999, Engelbrecht et al. 2007). A drought experiment conducted in a cacao agroforestry plantation showed that this plantation was surprisingly resilient to an induced drought of more

than a year (Schwendenmann et al. 2009). However, droughts can have a strong impact on household incomes from agriculture, they strongly affect the vulnerability to poverty and thus have to be analyzed as important exogenous shocks to households, forcing them to adjust their behaviour and develop strategies to cope with these problems. The stability of rainforest margins is a critical factor in the protection of tropical rainforests (Tschardt et al. 2007). At present, however, rainforest margins in many parts of the tropics are far from stable, both in socio-economic and in ecological terms. For example, protected areas may attract, rather than repel, human settlement, which may be due to international donor investment in national conservation programs (Wittemeyer et al. 2008). An alternative hypothesis is that protected areas might be compromised if leakage takes place, that is, if impacts that would take place inside the restricted area are displaced to a nearby, undisturbed area (Ewers and Rodrigues 2008).

Eighteenth Century English Literature-Charlotte Sussman 2013-04-18 This engaging book introduces new readers of eighteenth-century texts to some of the major works, authors, and debates of a key period of literary history. Rather than simply providing a chronological survey of the era, this book analyzes the impact of significant cultural developments on literary themes and forms - including urbanization, colonial, and mercantile expansion, the emergence of the "public sphere," and changes in sex and gender roles. In eighteenth-century Britain, many of the things we take for granted about modern life were shockingly new: women appeared for the first time on stage; the novel began to dominate the literary marketplace; people entertained the possibility that all human beings were created equal, and tentatively proposed that reason could triumph over superstition; ministers became more powerful than kings, and the consumer emerged as a political force. Eighteenth-Century English Literature: 1660-1789 explores these issues in relation to well-known works by such authors as Defoe, Swift, Pope, Richardson, Gray, and Sterne, while also bringing attention to less familiar figures, such as Charlotte Smith, Mary Leapor, and Olaudah Equiano. It offers both an ideal introduction for students and a fresh approach for those with research interests in the period.
