Innovation and Scaling for Impact-Christian Seelos 2017-01-04 Innovation and Scaling for Impact forces us to reassess how social sector organizations create value. Drawing on a decade of research, Christian Seelos and Johanna Mair transcend widely held misconceptions, getting to the core of what a sound impact strategy entails in the nonprofit world. They reveal an overlooked nexus between investments that might not pan out (innovation) and expansion based on existing strengths (scaling). In the process, it becomes clear that managing this tension is a difficult balancing act that fundamentally defines an organization and its impact. The authors examine innovation pathologies that can derail organizations by thwarting their efforts to juggle these imperatives. Then, through four rich case studies, they detail innovation archetypes that effectively sidestep these pathologies and

blend innovation with scaling. Readers will come away with conceptual models to drive progress in the social sector and tools for defining the future of their organizations.

Copyrighting Creativity-Professor Helle Porsdam 2015-08-28 What is the relationship between creativity, cultural heritage institutions and copyright? Who owns culture and cultural heritage? The digital age has expanded the horizon of creative possibilities for artists and cultural institutions - what is the impact on legal regimes that were constructed for an analogue world? What are the tensions between the safeguarding of cultural heritage and the dissemination of knowledge about culture? Inspired by a three year research project involving leading European universities, this book explores the relationship between copyright and intellectual property, creativity and innovation, and cultural heritage institutions. Its contributors are scholars from both the humanities and the social sciences - from cultural studies to law - as well as cultural practitioners and representatives from cultural heritage institutions. They all share an interest in the contribution of intellectual property to the role of cultural institutions in making culture accessible and encouraging new creativity.

Up and Running with AutoCAD 2011-Elliot Gindis 2010-09-22 *Up and Running with AutoCAD 2011: 2D and 3D Drawing and Modeling* provides an introduction to the fundamental concepts of AutoCAD. These concepts have been distilled down to basic, easy to understand explanations for the benefit of beginner students. Each chapter explains the new concept or command and why it is important. Readers are given the chance to apply just-learned knowledge to a real-life exercise, drawing, or model. They can also test their knowledge with end-of-chapter quizzes and drawing exercises. The book is organized into three parts: Level 1, Level 2, and Level 3. Level 1 offers a wide breadth of knowledge on many topics. Its chapters comprise the complete essential knowledge set of an intermediate user. Students can then work on, if not necessarily set up and manage, moderate to complex drawings. Level 2 is meant for advanced users who are CAD managers, full-time AutoCAD draftspersons, architects, or self-employed and must do everything themselves. The goal here is depth, and several features not deemed critically important in Level 1 are revisited to explore additional advanced options. Also introduced are advanced topics necessary to set up and manage complex drawings. Level 3 is all about 3D. Solid knowledge of the previous two levels is highly recommended before starting these chapters. The 3D material covers all aspects of AutoCAD solid modeling, including lights and rendering. Strips away complexities, both real and perceived and reduces AutoCAD to easy-to-understand basic concepts Teaches only what is essential to operating AutoCAD first, thereby immediately building student confidence All basic commands are documented step-by-step, meaning that what the student needs to type in and how AutoCAD responds is all spelled out in discrete and clear steps with screen shots added as needed Using the author's extensive multi-industry knowledge of what is important and widely used in practice versus what is not, the material is presented by immediately immersing the student in practical, critically essential knowledge, with no padding of text or filler material All concepts are explained first in theory, and only then is AutoCAD introduced and the actual "button pushing discussed. This is one of the key concepts in having students understand exactly what it is they are doing and why, before they do it
