Un pilote en mission-Claude Heiniger 2012-12-12 Cet ouvrage est une des très rares autobiographies qu'un pilote d'aviation en service missionnaire nous ait laissées. Il est même la seule publication francophone qui ait paru dans ce domaine depuis celle de Léon Bradfer intitulée A grands coups d'ailes vers l'Afrique missionnaire, datant de 1938, un père belge mû par la conviction que l'aviation pouvait ouvrir des horizons nouveaux pour la mission. Offert à titre posthume par Claude Heiniger décédé à l'âge de cinquante-sept ans après de longs mois de maladie, il relate les entrelacs d'un parcours dont la densité aura été exceptionnelle. En six chapitres, ce pilote en mission nous fait survoler le monde sur pas moins de quatre continents, nous emmenant d'une enfance laotienne à sa Suisse d'origine non sans de grands détours à travers les décors américains et les pistes camerounaises. C'est donc l'aventure d'une vocation déjà dessinée fort jeune, doublée d'une passion débordante pour l'aviation, qui nous est ici retracée. En chroniqueur pointu de son art, l'auteur distingue ce que le pilote en mission et la mission du pilote peuvent avoir de commun et de différent, tout en nous décrivant avec minutie les scènes vécues de ses vols jusqu'aux situations les plus critiques. Il nous donne également la chance de pénétrer de l'intérieur ce monde peu connu de l'aviation dite "missionnaire", un service exigeant appelé à soutenir principalement le travail des traducteurs de la Bible en langue autochtone dans les régions difficiles d'accès. Un autre monde également peu connu, régi par une activité scientifique hautement spécialisée, certes engagée, mais à visée également culturelle et éducationnelle. De façon originale, ce récit de vie, vrai et émouvant, contribue à enrichir un des nombreux pans de l'histoire missionnaire du XXe siècle.

Distrusting Educational Technology-Neil Selwyn 2013-11-26 Distrusting Educational Technology critically explores the optimistic consensus that has arisen around the use of digital technology in education. Drawing on a variety of theoretical and empirical perspectives, this book shows how apparently neutral forms of educational technology have actually served to align educational provision and practices with neo-liberal values, thereby eroding the nature of education as a public good and moving it instead toward the individualistic tendencies of twenty-first century capitalism. Following a wide-ranging interrogation of the ideological dimensions of educational technology, this book examines in detail specific types of digital technology in use in education today, including virtual education, 'open' courses, digital games, and social media. It then concludes with specific recommendations for fairer forms of educational technology. An ideal read for anyone interested in the fast-changing nature of contemporary education, Distrusting Educational Technology comprises an ambitious and much-needed critique.

An Introduction to 3D Computer Vision Techniques and Algorithms-Boguslaw Cyganek 2011-08-10 Computer vision encompasses the construction of integrated vision systems and the application of vision to problems of real-world importance. The process of creating 3D models is still rather difficult, requiring mechanical measurement of the camera positions or manual alignment of partial 3D views of a scene. However using algorithms, it is possible to take a collection of stereo-pair

images of a scene and then automatically produce a photo-realistic, geometrically accurate digital 3D model. This book provides a comprehensive introduction to the methods, theories and algorithms of 3D computer vision. Almost every theoretical issue is underpinned with practical implementation or a working algorithm using pseudo-code and complete code written in C++ and MatLab®. There is the additional clarification of an accompanying website with downloadable software, case studies and exercises. Organised in three parts, Cyganek and Siebert give a brief history of vision research, and subsequently: present basic low-level image processing operations for image matching, including a separate chapter on image matching algorithms; explain scale-space vision, as well as space reconstruction and multiview integration; demonstrate a variety of practical applications for 3D surface imaging and analysis; provide concise appendices on topics such as the basics of projective geometry and tensor calculus for image processing, distortion and noise in images plus image warping procedures. An Introduction to 3D Computer Vision Algorithms and Techniques is a valuable reference for practitioners and programmers working in 3D computer vision, image processing and analysis as well as computer visualisation. It would also be of interest to advanced students and researchers in the fields of engineering, computer science, clinical photography, robotics, graphics and mathematics.

One Day-Gene Weingarten 2020-09-08 A journalist pulls a random day in history from a hat to see if he can make a worthwhile news story from what happened. The result is One Day, a deeply illuminating and affecting exploration of the quiet dramas and human interaction that make a seemingly insignificant day - December 28th, 1986 - into an important, poignant part of American history.

CENELEC 50128 and IEC 62279 Standards-Jean-Louis Boulanger 2015-03-24 CENELEC EN 50128 and IEC 62279 standards are applicable to the performance of software in the railway sector. The 2011 version of the 50128 standard firms up the techniques and methods to be implemented. This is a guide to its implementation, in order to understand the foundations of the standard and how it impacts on the activities to be undertaken, helping towards better a preparation for the independent evaluation phase, which is mandatory.

Intelligent Decision Making: An AI-Based Approach-Gloria Phillips-Wren 2008-03-04 Intelligent Decision Support Systems have the potential to transform human decision making by combining research in artificial intelligence, information technology, and systems engineering. The field of intelligent decision making is expanding rapidly due, in part, to advances in artificial intelligence and network-centric environments that can deliver the technology. Communication and coordination between dispersed systems can deliver just-in-time information, real-time processing, collaborative environments, and globally up-to-date information to a human decision maker. At the same time, artificial intelligence techniques have demonstrated that they have matured sufficiently to provide computational assistance to humans in practical applications. This book includes contributions from leading researchers in the field beginning with the foundations of human decision making and the complexity of the human cognitive system. Researchers contrast human and artificial intelligence, survey computational intelligence, present pragmatic systems, and discuss future trends. This book will be an invaluable resource to anyone interested in the current state of knowledge and key research gaps in the rapidly developing field of intelligent decision support.

Advances in Safety, Reliability and Risk Management-Christophe Berenguer 2011-08-31 Advances in Safety, Reliability and Risk Management contains the papers presented at the 20th European Safety and Reliability (ESREL 2011) annual conference in Troyes, France, in September 2011. The books covers a wide range of topics, including: Accident and Incident Investigation; Bayesian methods; Crisis and Emergency Management; Decision Making Seven Databases in Seven Weeks-Luc Perkins 2018-04-05 Data is getting bigger and more complex by the day, and so are your choices in handling it. Explore some of the most cutting-edge databases available - from a traditional relational database to newer NoSQL approaches - and make informed decisions about challenging data storage problems. This is the only comprehensive guide to the world of NoSQL databases, with in-depth practical and conceptual introductions to seven different technologies: Redis, Neo4j, CouchDB, MongoDB, HBase, Postgres, and DynamoDB. This second edition includes a new chapter on DynamoDB and updated content for each chapter. While relational databases such as MySQL remain as relevant as ever, the alternative, NoSQL paradigm has opened up new horizons in performance and scalability and changed the way we approach data-centric problems. This book presents the essential concepts behind each database alongside hands-on examples that make each technology come alive. With each database, tackle a real-world problem that highlights the concepts and features that make it shine. Along the way, explore five database models - relational, key/value, columnar, document, and graph - from the perspective of challenges faced by real applications. Learn how MongoDB and CouchDB are strikingly different, make your applications faster with Redis and more connected with Neo4j, build a cluster of HBase servers using cloud services such as Amazon's Elastic MapReduce, and more. This new edition brings a brand new chapter on DynamoDB, updated code samples and exercises, and a more up-to-date account of each database's feature set. Whether you're a programmer building the next big thing, a data scientist seeking solutions to thorny problems, or a technology enthusiast venturing into new territory, you will find something to inspire you in this book. What You Need: You'll need a \*nix shell (Mac OS or Linux preferred, Windows users will need Cygwin), Java 6 (or greater), and Ruby 1.8.7 (or greater). Each chapter will list the downloads required for that database.
